## WORK EXPERIENCE

### Full-stack software engineer internship Virginia, United state

Sep. 2022 – Dec. 2022

Jobs4Interns – Domenix

- Migrated codebase from **React class** to **functional components**, improving code maintainability and performance.
- Utilized the **MERN stack** to design and implement **RESTful APIs**, allowing for efficient data transfer between the front-end and back-end.
- Implemented **React-Redux** to manage the application state and improve code scalability and organization.

## EDUCATION

**Green River College** Auburn, WA

Jan. 2017 - May 2019

**Associate in Arts** in Information Technology

**CGPA: 3.94/4.00**

- Relevant course work: Front-end Web programming, Java OOP, Data Structures, SQL Database

**State University of New York (SUNY), College at Oswego**

Jan. 2021 – exp. May. 2023

**Bachelor of Science** in Computer Science

**CGPA: 4.00/4.00**

- Relevant Courses: System programming (C), Software Engineering (Java, React, Liberty), Algorithms and Data Structures

## PROJECTS

### Support Who You Love (SWYL) (*Full stack + Blockchain development*)

(Capstone project) – <https://github.com/swyly> - <https://swyl.vercel.app>

- Led the development of the **SWYL** platform as a solo developer, utilizing front-end technologies such as **Next.js**, **TypeScript**, and **React.js** for efficient and user-friendly user experience
- Implemented **3 restful-based microservices** for the backend using **Golang** and **MongoDB**, providing a robust and scalable infrastructure for **off-chain data** management and **API services**
- Incorporated advanced **security measures** by combining the **golang-jwt** library with **cryptographic functions** from the **go-ethereum** library, ensuring secure user authentication and authorization, as well as safeguarding sensitive data
- Developed and deployed **5 Solidity smart contracts** on the **Polygon Network**, allowing for **low-cost** and **efficient NFT creation** and **management**, as well as supporting **club membership** and **donation functionalities**

### Calibrated Peer Review (*Java Back-End developer*)

(Course/Team Project) - [github.com/tenbergen/CSC480-22S](https://github.com/tenbergen/CSC480-22S)

- Implemented a microservice architecture utilizing **IBM's Open Liberty** application server to host each individual service
- Applied token-based authentication mechanisms to all system microservices by integrating **MicroProfile JWT** to authenticate, authorize, and identify users based on different roles
- Developed clean and efficient **RESTful APIs** to provide the React client application with dynamic data based on user inputs and HTTP requests

### Data Analytic Yelp App (*Full-Stack Developer*)

(Course/Individual Project) - [github.com/logann131/CSC-365-fullstack-app-III](https://github.com/logann131/CSC-365-fullstack-app-III)

- Utilized the **Java Spring Boot** framework to create a standalone resource server for hosting data analytics from a dataset retrieved from **Yelp**.
- Incorporated **customized B-Tree data structure** and **MySQL Docker** image to store all the data and information to provide faster data lookup time and optimize the memory space in disk

## SKILLS

<b>Programming</b>	Java • Python • JavaScript (ES6) • TypeScript • C • C++ • SQL • Dart • PHP
<b>Front-End</b>	NextJS • React • HTML5 • CSS • Tailwind • Styled Component • Bootstrap • WordPress
<b>Back-End</b>	Golang • Open Liberty • Spring Boot • NodeJS • Express • MongoDB • MySQL • Rest API • Firebase
<b>Blockchain</b>	Ethereum • Solidity • Hardhat • Waffle • Ethers.js • Truffle
<b>Deployment</b>	AWS • Netlify • Heroku • Docker
